Table of Contents

Vulnerabilities

Description

ECS vulnerability scanning delivers network profiling and monitoring in a non-intrusive manner, and allows scans for the following types of vulnerabilities:

- Vulnerabilities that allow a remote hacker to control or access sensitive data on a system.
- Misconfiguration (e.g. open mail relay, missing patches, etc.).
- Default passwords, a few common passwords, and blank/absent passwords on some system accounts.
- Denials of service against the TCP/IP stack by using malformed packets

This scan will typically run on a weekly basis unless otherwise specified.
